Team

Sober Hathi

Almost as wild as a drunken elephant.

Just sober.

meet Pablo

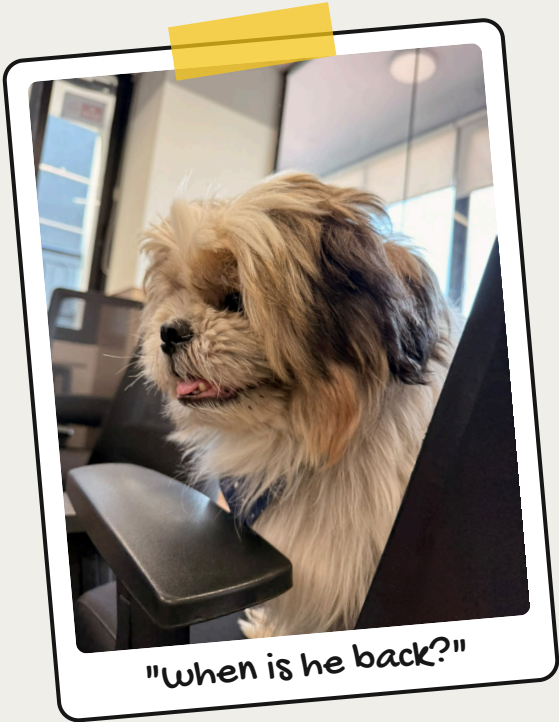

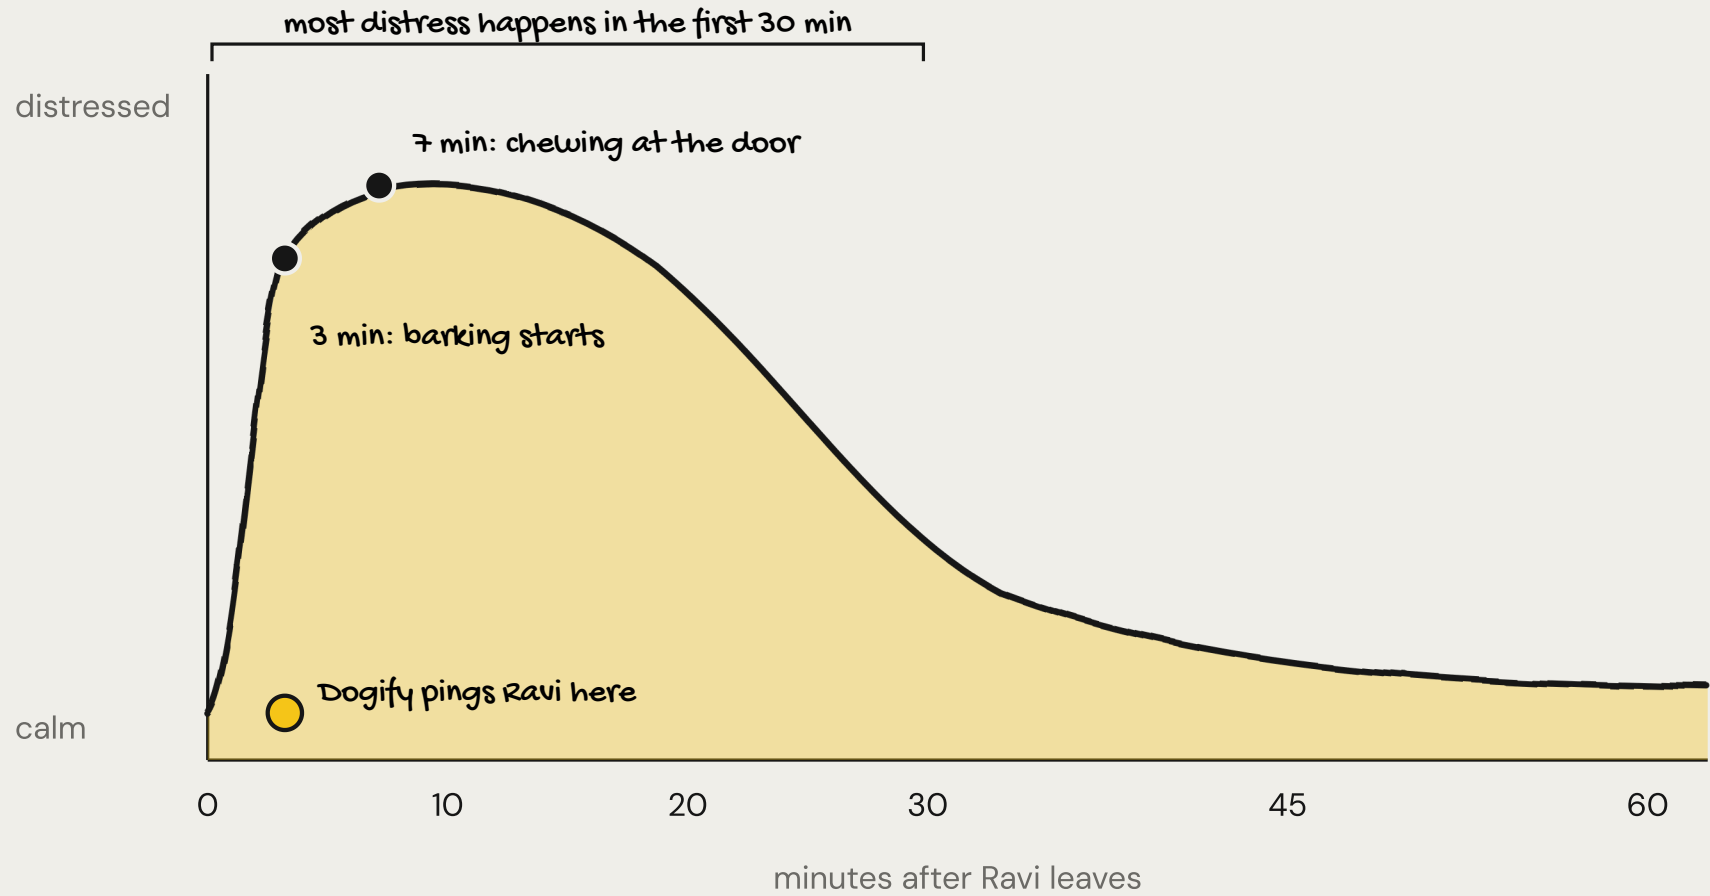

presenting

Dogify

be there for your dog, from anywhere

problem statement 1 · the dog

Left alone, Pablo panics within minutes, and nobody notices.

Marked times: Palestrini et al. 2010 video study, cited in Sargisson 2014 ([link](#)); first-30-minutes: ASPCA, VCA. Curve shape is illustrative.

problem statement 2 · the owner

Ravi worries all day, and can only watch, not help.

90%

feel guilty leaving their
pet alone

73%

have cancelled plans for
their pet

32%

want a camera just to
watch

"Every rehearsal break, one thought: is Pablo okay?"

90% and 73%: Power Wizard 2025, US owners, n=1,512 ([link](#)). 32%: YouGov 2025, US dog and cat owners ([link](#)). Brand and panel surveys, not peer-reviewed.

who we're building for

Two personas. One very fluffy.

Pablo · Shih Tzu, 4

Alone: 9 hours a day
Loves: his bandana, a squeaky ball, Ravi's voice
Anxious: barks at the door, paces

"woof." (translation: is he coming back?)

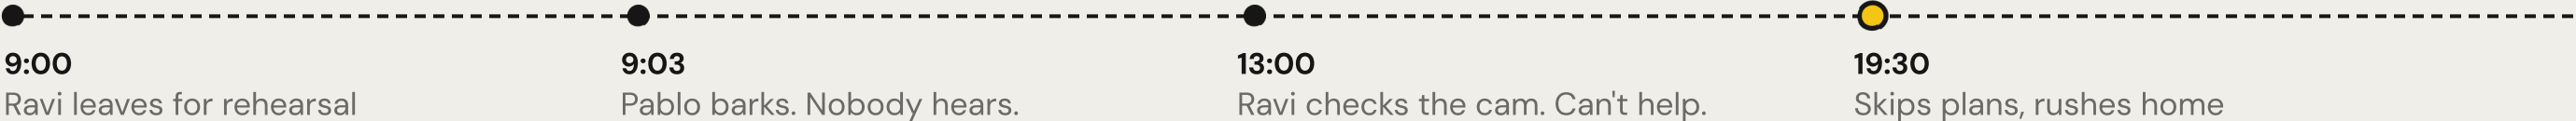

Ravi Kishan · 32, professional dancer

Day: rehearsals, then evening shows
Today: checks the pet cam between rehearsals. Can't do anything.
Gave up: Friday plans, twice this month

"I don't need AI to raise my dog. I need to be there when he needs me."

a weekday, side by side

Illustrative personas.

problem validation

It's not just Pablo. The data says it's common.

46.9%

of puppies already struggle when left alone

14 to 20%

of pet dogs have separation anxiety

\$3.6B → \$7B

India pet-care spend, FY24 to FY28

₹50k

a year spent by metro pet parents on pet care

Pet cams don't fix it

They alert on barking and wait for the owner to watch. None detect anxiety.

1/11

Sources: Dale et al. 2024, *Animal Welfare*, n=145 ([link](#)) · Pankratz et al. 2021 ([link](#)) · Redseer 2024, both India figures ([link](#)) · Furbo, Petcube product pages.

What a lonely dog does, and what actually calms him.

1 · When it starts

First minutes after he leaves
Routine changes (back to office)
Fuss on return: **6x** risk

2 · What we catch

Anxiety and behaviour, read from signals:
 **Mic:** barking, whining
 **Camera:** pacing, panting, chewing at the door

3 · What calms

 Owner's voice **mixed**
 Treat, when calm **moderate**
 Favourite toy **weak**
 Video **weak**

No single fix works for every dog. So Ravi chooses, and Dogify learns what works for *Pablo*.

the solution

No AI in between. Ravi knows Pablo like no one else.

Dogify **watches and tells**. Ravi acts.

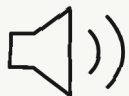

For Pablo: help within minutes. For Ravi: peace of mind, and control.

AI does

Anxiety alerts · reports on request

AI never does

Decide for Ravi

Voice note

Ravi's voice, live

Video

On a screen at his eye level

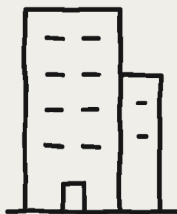

Treat

Only when he's calm

Favourite toy

Turns worry into play

Ravi, at the dance studio

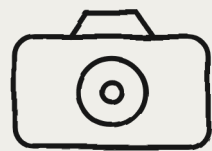

voice · video · treat · toy

Pablo, at home

how it works

From "is he okay?" to "he's okay" in one tap.

1. Dogify watches

camera, mic, distance sensor

2. AI spots it

"anxious: pacing by the door"

3. Ravi gets a ping

photo + mood on Telegram

4. Ravi acts

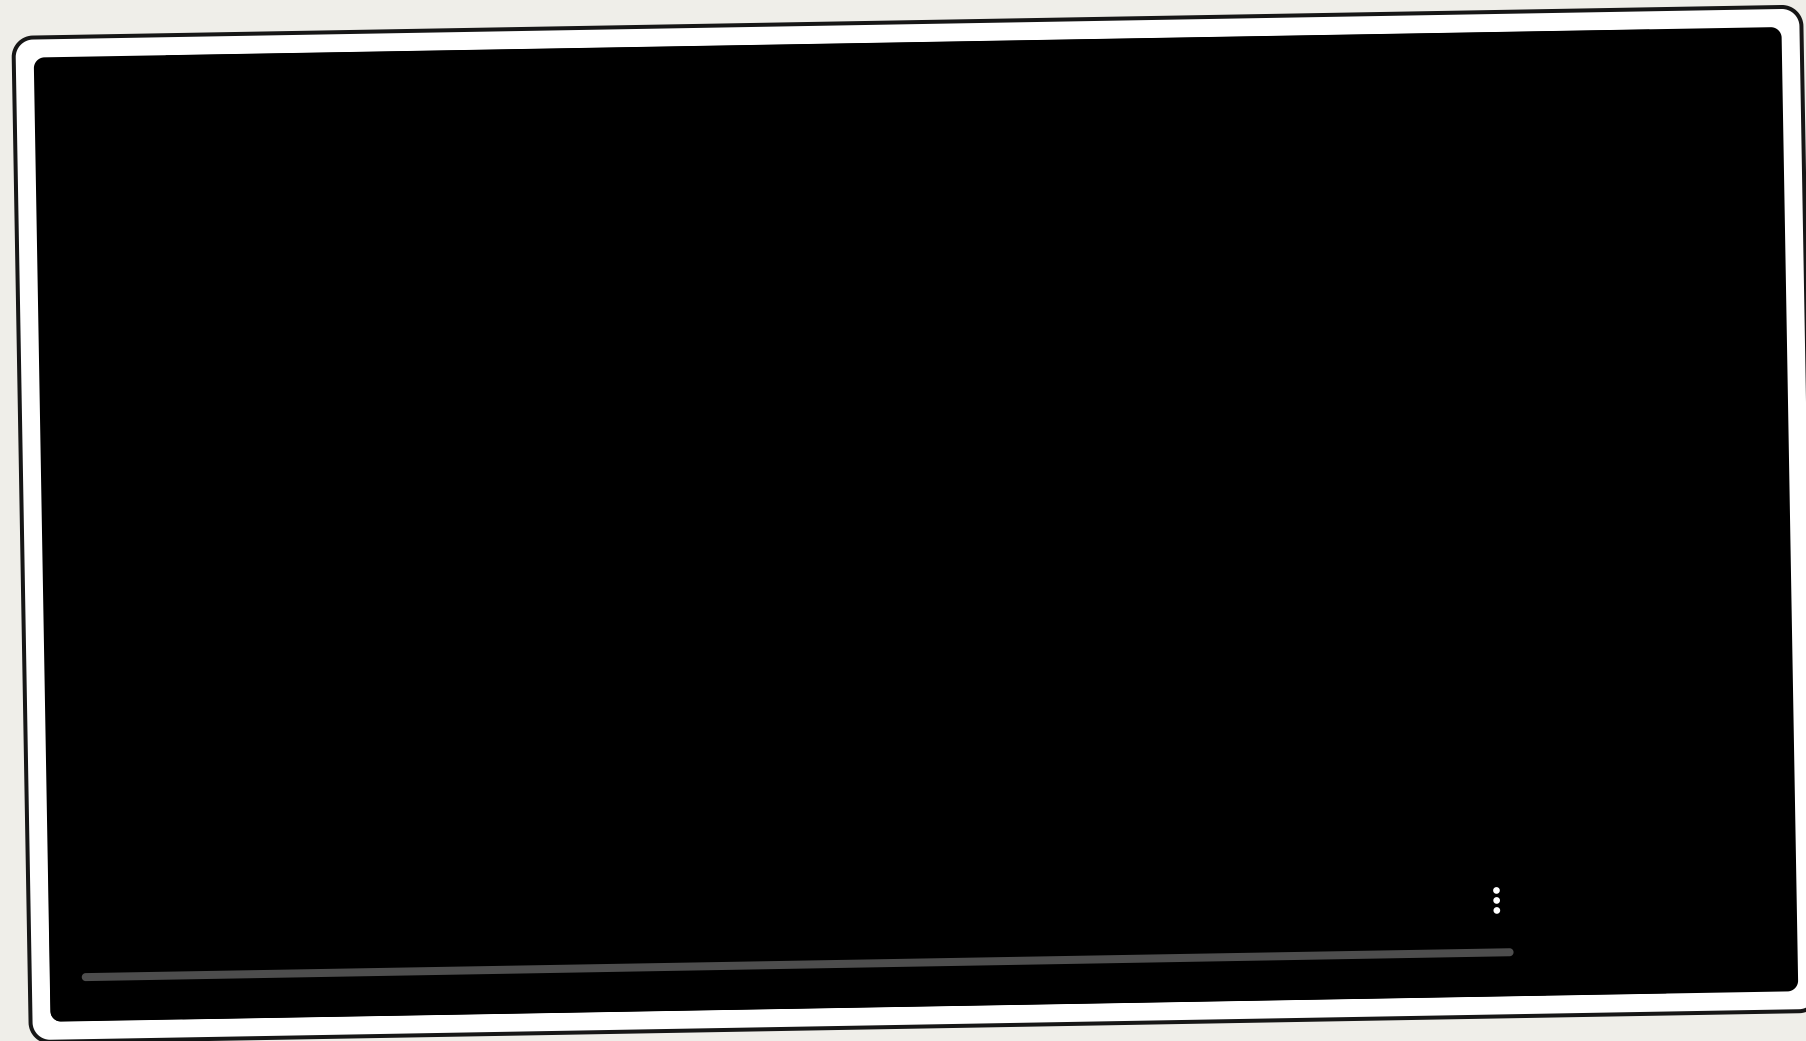

voice, video, treat or toy

Reports on request

Ravi asks for **today, the last 7 days, or all time**, and sees what calmed Pablo.

it works · live prototype

Built this week: camera + AI + Telegram + dog screen.

Working

AI mood reading · Telegram controls ·
dog screen · distance sensor

Next

Servos for treat and ball (by hand
today)

"Dogs do speak, but only to those
who know how to listen."

Orhan Pamuk, My Name Is Red

Thank you!
